## BOTTLE ROLLER

By using a roller mixer, you can achieve optimal mixing of the material and thereby prevent possible segregation. The Eco Bags can be homogenized with a corresponding attachment.

## CLEANING

The best cleaning results for construction jobs are achieved when pre- and post-cleaning is carried out in separate containers in an ultrasonic device. After cleaning with isopropanol, it is recommended to clean the bores/openings with compressed air.

## POST CURING UNIT

The post-curing units recommended in the instructions for use enable optimal thorough and surface hardening and thus guarantee a biocompatible end product. They also ensure high color brilliance and transparency, without discoloration.
